

Proposal for Activities Involving Animals

0: Title

Proposal Title

Adenovirus prevalence in client-owned bearded dragons

Project Type

☒ Research ☐ Teaching ☐ Breeding ☐ Other

Principal Investigator (PI)

Name: Sosa Higareda, Mariana
Net Id: msosahi

In the context of IACUC protocols and compliant animal use, someone may be considered as the PI if they have responsibility and authority for the research or teaching activities being conducted, and for the staff and students participating in the work. This level of control and responsibility typically falls to a faculty member that reports directly to a Department or Unit Head. There are occasional exceptions when someone other than a faculty member has the required authority. If you have any questions, please contact the IACUC Office at iacuc@illinois.edu, or 333-7789.

PI Responsibilities:

- The Principal Investigator (PI) agrees to comply with all federal and state laws, regulations and guidelines and all institutional policies and procedures concerning the care and use of animals in research, teaching and extension.
- The PI affirms that this proposal does not unnecessarily duplicate previous research.
- The PI is responsible for obtaining IACUC approval in writing before making any changes in project procedures, personnel, locations, numbers or species of animals to be used.
- The PI agrees to notify, within 24 hours, the laboratory or agricultural Animal Care Program (ACP) veterinary staff and the Office of Animal Research Compliance (OARC) of all unexpected illnesses, injuries, or deaths occurring to animals assigned to this protocol.
- The PI agrees to notify, within 24 hours, the ACP veterinary staff and the OARC Office of all deviations from the procedures described and approved in this protocol.
- The PI is responsible for ensuring that the description of animal use in this protocol is the same as that described in intramural and extramural proposals approved for funding.
- PI agrees to notify the OARC Office if he or she leaves the University, or will be away from campus for an extended period (such as sabbatical). See Policy: <https://animalcare.illinois.edu/policies/extended-absence-from-campus>.

If you have any questions, please contact the IACUC Office by telephone at 333-7789, or e-mail at iacuc@illinois.edu.

☒ I have read and accept these responsibilities.

Senior Personnel

Senior Personnel must be qualified to make decisions if the PI is absent or unavailable.
Senior Personnel have complete edit access to this protocol and receive all correspondence.

Name	Net Id	Email
Blum, Emily	erblum2	erblum2@illinois.edu

Project Personnel

Project Personnel have read only access to this protocol.
There are no records.

1: Project Overview

1.0. Project Overview

Provide a description of the project and its intended benefits **using terms understandable to a layperson**. If this is a teaching activity, describe the specific educational goals to be met by the use of animals.

Agamid-Adenovirus 1 (Agamid-AdV1)-associated disease is potentially fatal in bearded dragons as it can affect the GI tract, liver, and the neurological system. The prevalence in client-owned bearded dragons is not known and there is minimal information regarding the clinical presentation changes that could guide a clinician's decisions in treatment and diagnostic plans. This project aims to investigate the prevalence of Agamid-Adenovirus 1 (Agamid-AdV1) within the pet population in Illinois, additionally, looking into the correlation between symptomatic and asymptomatic cases of those AdV1 positive, as well as associated hematological changes. The study design involves collecting samples from all client-owned bearded dragons, regardless of their health status to determine the prevalence of the virus as well as to correlate positive/negative status with hematological changes. This approach will provide a more comprehensive understanding of the clinical signs and bloodwork alterations associated with Agamid-AdV1 in squamates. Ultimately, this research will contribute to the broader scientific knowledge of the disease and support improved veterinary care for affected patients.

Approved: 7/10/2025
Expires: 7/9/2028

2: Species

2.1. List species, sources and numbers.

Species	Vendor/Source	Quantity
Reptile*	Client/Privatey Owned	50

Check which of the following applies to the Client/Privatey owned animals to be used:

☒ I will be enrolling animals in this research protocol that are covered by the College of Veterinary Medicine policy on the use of privately-owned clients/patients in research. I understand that I am responsible for ensuring that enrollment procedures conform to the policies of the College of Veterinary Medicine, which includes providing a consent form and obtaining the owner’s signature prior to conducting the research.

☐ I will be enrolling animals that are privately owned but are not covered by the CVM Policy. I understand that I am responsible for ensuring that the owner understands all procedures and risks of such procedures prior to conducting the research, teaching, or demonstration activities.

3: Rationale for Species

3.0. Rationale for Involving Animals

Explain your rationale for the use of animals in this activity.

Explain:

- Why a non-animal, non-vertebrate or in-vitro model or system cannot replace animals for the proposed use.
- Why animals are necessary for the proposed use.
- Why the species chosen is appropriate.
- If only one sex of animal is used, why?

The rationale for our use of animals vs. a modeling system is that we are looking for the prevalence of disease in client-housed animals. This procedure can not be replicated within a lab setting. The chosen species is appropriate since we want to collect data on client-owned patients, and Bearded Dragons are amongst the most common reptilian pets seen at the University of Illinois College of Veterinary Medicine Zoology Department. We will be using both sexes of animals because our area of research is not sex dependent.

4: Rationale for Numbers

4.0. Rationale for Numbers of Animals

Explain how the number of animals requested was determined to be appropriate. Whenever possible, the number of animals requested should be justified statistically. You should employ methods that minimize the number of animals required, and minimize animal distress, without compromising your ability to obtain valid results.

Wildlife: Provide justification for the number of **target** species to be collected, sampled or manipulated.

- For wildlife population surveys, estimate expected numbers of target species to be manipulated as described in Section 5, using past experience and/or published data, and include the number of sites to be visited and frequency of visits.
- For experimental wildlife studies, use power analysis when possible, or refer to similar published studies.

As this is a prevalence study, we will evaluate the positive or negative status in the first 50 bearded dragons presenting to the clinic, as it's considered to be representative of the pet population in the area.

5: Description of Use

5.0. Description of Animal Use

Explain the experimental design and all animal procedures. This description should allow the IACUC to understand the sequence, frequency and duration of procedures an individual animal will experience from its assignment to the experiment to the endpoint of the study.

All bearded dragons that present through the VTH, Zoomed service for an exam will undergo a full physical exam, including weight, heart rate and palpation of the coelom as part of the routine exam. The exams and procedures are performed by veterinary technicians, veterinarians or training veterinarians in the Zoological Medicine rotation. Additional procedures for this specific study include an oral and cloacal swab, which is minimally invasive, for Adenovirus PCR. Blood sample collection may be performed as part of the research. Venipuncture procedure will consist of a single blood draw of 0.5 mL of blood from the ventral coccygeal vein for a chemistry liver panel. If blood sample is indicated as part of the routine exam due to their presentation, additional blood (0.5 mL) will be collected for research purposes. The total blood volume collected will not exceed 1% of the patient's body weight. Average weight of bearded dragons is 300g, 3ml can be safely collected from a 300g animal. Diagnostic blood samples, as indicated for medical care, will be prioritized in animals that weigh less than 100g. The reason behind using several different testing parameters is to correlate the presence of the virus with changes in their chemistry profile. One study demonstrated the use of cloacal and oral swabs, as well as post-mortem testing. They detected Adenovirus in all three, but for some subjects, they only received positive results from one testing method. Because of this, we want to use different testing sites to ensure the most accurate data. VTH patients will undergo medical procedures that are required for medical management of disease or diagnostics as needed, these will not be part of the study. Animals will only be sampled once in the course of the study, participation in the study and procedures will be noted in the medical record, additionally a note on the patient's home page in SANDI will be added as an internal messaging system to indicate that the animal has been sampled to avoid repeated sampling in the event that the same animal presenting to the VTH multiple times.

6: Guide Exceptions

6.1. Do procedures described above require exceptions to the "Guide" or "Ag Guide" or University policies?

☐ Yes ☒ No

6.2. Use of non-pharmaceutical grade drugs in live animals

Select "Yes" ONLY if the experimental drug(s) or chemicals you plan to use are available in pharmaceutical form, but CANNOT be used (e.g. due to availability, form, concentration, etc.). Such use must be justified.
DO NOT list drugs that are not available in pharmaceutical form.
Researchers intending to use non-pharmaceutical pentobarbital in IACUC protocols must clearly state that **they have read the IACUC policy on use of non-pharmaceutical grade drugs, and will use the indicated recipe and instructions for use stated in that policy**, and will describe and justify any planned deviations from it.

☐ Yes ☒ No

7.1. Does animal use in this protocol involve any of the following?

a.1) Biological materials that require Institutional Biosafety Committee (IBC) review. (See [research material requiring IBC review](#))

☒ Yes ☐ No

Please select from the following IBC Projects:

	IBC Number	Project Id	Project Title	Status	Approval Date
☒	IBC-410.1	410.1	Adenovirus prevalence in client-owned bearded dragons	Approved	7/9/2025

To register a new IBC project please go to [IBC web site](#).
IBC submission and approval is not required prior to IACUC protocol submission. However, their approval must be final before IACUC can approve your protocol.

a.2) Cell lines (See policy: <http://research.illinois.edu/regulatory-compliance-safety/policy-testing-biological-specimens-be-implanted-live-laboratory>)

Many infectious agents of rodents can be carried in cell lines and tissues which, when implanted into naive host animals, may serve as a source of infection and jeopardize whole colonies. To minimize the likelihood of inadvertent infection, tumors, tissues, cell lines, and ascites fluid must be pathogen tested prior to experimental use in vivo. Contact the ACP veterinary technicians for assistance (acp-techs@illinois.edu). See examples and scenarios at https://animalcare.illinois.edu/sites/default/files/recommendation_and_scenario.pdf.
Human and genetically modified cell lines must be registered with the IBC.

☐ Yes ☒ No

b. [Chemicals that require Division of Research Safety review](#). (See [Chemical Review for Animal Users](#))

EXEMPT CHEMICALS

The following categories of chemicals are **exempt** from listing here, but **must** be described in Section 5. For any chemicals used in food animals, Section 15 **must** also be completed.

- Commercially available, FDA-approved drugs (including standard analgesics, anesthetics and antibiotics, antineoplastics) used as intended by the manufacturer.
- Hormones and hormone-like chemicals used in a form that is unaltered from FDA-approved form, and used according to manufacturer's recommendations.
- Hormones and hormone-like chemicals that are administered in physiological concentrations, or are used in routine agricultural practice. See

[Occupational Exposure to Hormones in Agricultural Facilities.](#)

Note that such chemicals may still have risks associated with them, and all personnel using them must read package inserts and be aware of these risks. These exempt chemicals should be handled using basic PPE. If any exempt substance requires more than basic PPE, or will be used in a manner or concentration that is atypical (i.e. of higher than normal risk), list below in section 7.2.

NON-EXEMPT CHEMICALS:

Chemicals used in live animals that are **potentially hazardous to researchers, animal handlers, and caretakers of treated/exposed animals** must be listed, and hazards communicated to personnel who may be exposed to them.

Chemicals that have [GHS classification](#) of **Health Hazard** or **Acutely Toxic** must be listed. Refer to Section 2 of the SDS for your chemical to determine its hazard level. Diluted chemicals that will still have the same GHS classification must be listed.

Experimental compounds with **unknown** hazards and **Nanoparticles** must be listed.

Safety precautions for handling these chemicals in the laboratory must be covered in the group's Laboratory Safety Plan.

1) Will you be using chemicals in live animals that are required to be listed?

☐ Yes ☒ No

c. Radioisotopes administered to live animals (see Radiation Safety Information [here](#))

☐ Yes ☒ No

d. Potential for personnel exposure to endogenous or naturally occurring pathogens.

For information on zoonotic diseases see the OHS web site [Fact Sheets](#).

☒ Yes ☐ No

If you answered yes, please list the pathogens:

Salmonella

7.2. Safety Precautions

If answering Yes to any Category in Section 7.1, provide a brief description of all safety precautions required for each category, including Personal Protective Equipment necessary for individuals (facility animal care staff and research staff) working with and/or caring for the animals. If an IBC Project is involved, indicate if the project includes animals with **ABL2 status**.

Agamid-adenovirus is not considered zoonotic. Personnel handling reptiles should always wear gloves, regardless.

7.3. Controlled Substances Licenses

Will DEA controlled substances be used?

☒ Yes ☐ No

Will the Principal Investigator be using personal state and federal controlled substance licenses? If no, indicate whose license you will use, or “VTH Institutional License”. List the specific drugs to be obtained under the VTH license.

☐ Yes ☒ No

UIUC VTH Institutional license; Pentobarbital for emergency euthanasia if needed.

I will be using the license of (Name and NetID or Institutional license holder):

8: Surgical Procedures

8.0. Surgical Procedures

Does this project include surgery?

☐ Yes ☒ No

University of Illinois
Institutional Animal Care and
Use Committee
Approved: 7/11/2025
Expires: 7/9/2028

Note: Documentation of surgical procedures and post-surgical care is required and is the responsibility of the PI.

- Surgical records must be submitted electronically using the online protocol system for review within 21 days of the date of surgery. Refer to the [Survival Surgery Policy](#) for instructions on uploading surgical records to the protocol system.
- Surgical procedures that are exempt from surgical records submission requirements are:
 - Standard agricultural neonatal processing procedures (e.g. piglet castration or piglet tail docking)
 - Components of teaching protocols (e.g. wet lab specimen preparation, surgical training). These surgical reports must be readily available for review by veterinary staff, IACUC and outside inspectors.

You are required to keep these surgical records for 3 years after the termination of this project.

- Sample surgery records can be found on the [OVCR](#) website.

9: Clinical Outcomes

9.0. Genetic Abnormalities

Are any animals assigned to or produced on this protocol considered to be genetically modified organisms or spontaneous mutants (eg. db/db mice, Nude mice)?

☐ Yes ☒ No

9.1. Clinical Signs Expected

Are clinical signs (weight loss, behavioral abnormalities, fever, illness, lesions,etc.) expected in the animals, whether as an integral part of the planned procedure (genotyping, experimental treatments, surgery, etc) or as an incidental side effect?

☐ Yes ☒ No

10: Minimizing Pain

10.0. Minimizing Pain and Distress

A painful procedure is one that would reasonably be expected to cause more than slight or momentary pain or distress in a human being to which that procedure is applied. This includes all survival and terminal surgeries that are performed under anesthesia.

10.1. Pain Level

- Indicate whether animals will be subjected to procedures that will cause discomfort, distress, pain, deprivation, or prolonged restraint.
- ☒ Only minimal, transient, or no pain or distress, and/or only standard agricultural practices, will be experienced by animals on this protocol.*
- *Care requirements for animals undergoing standard agricultural practices should follow those described in the most current version of the [FASS Guide for the Care and Use of Agricultural Animals in Research and Teaching](#). See also the [Guide for the Care and Use of Laboratory Animals](#)
- ☐ Pain or distress **will be relieved** by appropriate measures(e.g. analgesia, anesthesia, sedation, training, acclimation, euthanasia BEFORE severe pain/distress evolves, etc.).
- ☐ Unrelieved pain or distress, deprivation or prolonged restraint is unavoidable for some animals on this protocol.

11: Veterinary Care

11.1. Veterinary Care

- Indicate all veterinary services that may provide clinical care in the event of animal illness or injury resulting from or unrelated to the protocol.
- ☐ ACP-Lab Veterinarians
- ☐ ACP-Ag/FARMS/Midwest Equine Veterinarians
- ☒ Project Staff
- ☒ Client-Owner
- ☐ Site Contracted Veterinarian
- ☐ Other

Please explain why your choice should provide vet care. If the Principal Investigator or other qualified member of the research staff will have the primary responsibility for veterinary care, complete Appendix B, Veterinary Care Plan for Investigator-Provided Veterinary Care.

PI is a clinician at the VTH Zoomed service and this study will use client-owned animals as subjects. When the procedures are being done it will be during a medical appointment at the hospital. Although no complications are expected, clients will sign a VTH consent form to move forward with the procedures and to acknowledge potential complications (Form attached as a supplemental document).

For off-campus animal use, if care will be provided by a site contract veterinary service, provide name and contact information:

There are no records.

Appendix B: Download *Veterinary Care Plan for Investigator-Provided Veterinary Care*. Then print, complete, sign, scan, and attach the file below.

Name	Description	Size
iacuc_protocol_appendix_b.pdf	FIELD NOT FOUND	194790

12: Animal Care and Use Locations

12.1. Housing Locations in University Facilities

Will animal housing for more than 12 hours take place in University facilities?

☐ Yes ☒ No

12.2. Procedure Locations

a. List locations where procedures will take place inside an Animal Care Unit, regardless of housing.

Location
Veterinary Teaching Hospital - Small Animal Clinic (VTH SAC)

b. If live animal **procedures** (including euthanasia) or **food (including treats) storage** will take place outside of an Animal Care Unit, list all buildings and room numbers, and briefly list procedure(s) that will be performed in each room. These locations will be inspected by the IACUC twice each year as required by federal regulations.

NOTE: For information about regulations regarding storage of animal food, see pages 66-67 and 141-142 of the [Guide for the Care and Use of Laboratory Animals: Eighth Edition](#).

Building	Room	Procedures
Veterinary Medicine South Clinic (VMSC) - Simulator Building	32A	exams, swabs, blood collection

c. Describe how animals will be transported between housing and use locations.

See Guideline (https://research.illinois.edu/files/upload/transportation_guidelines.pdf).

Animals will not be transported as they are client-owned they will be brought in by owners to the VMSC

d. Will animals be transported between locations in a vehicle?

☐ Yes ☒ No

e. Will any animals be returned to the animal care facilities following procedures conducted in other locations?

☐ Yes ☒ No

12.3. Non-University Housing and Use Locations

Will animal care and/or use take place at another institution or facility (e.g. private farm, collaborating institution)?

☐ Yes ☒ No

12.4. Animal Husbandry

Who will have primary responsibility for providing daily animal care (cleaning, feeding, watering, etc.)?

No Husbandry Needed

Explanation:

Clients

13: Field Studies

13.0. Field Studies

Will animal use and/or care take place at a wildlife site?

☐ Yes ☒ No

14: Animal Disposition

14.1. Disposition of animals

Disposition of animals at the end of the study will be (check all that apply).

☐ Euthanasia using acceptable procedures as described in the "AVMA Guidelines on Euthanasia."

Describe the method(s) of euthanasia to be used. For CO2 asphyxiation, a secondary method may be necessary to ensure death (e.g. decapitation, pneumothorax, exsanguination). If cervical dislocation or decapitation will be used without prior anesthesia or sedation, provide the rationale for withholding anesthetics or sedatives. Alternate methods of euthanasia not approved by AVMA must be scientifically justified in Section 6.1.

☒ Return to breeding colony/herd/source/owner/wildlife site.

☐ Transfer to another UIUC IACUC approved protocol.

Will transgenic animals be transferred to other projects or investigators?

☐ Yes ☒ No

☐ Slaughter (use ONLY if the meat from carcasses is destined for human/animal consumption)

☐ Sale (must conform with the applicable provisions of the "State Property Control Act")

☐ Adoption (must conform to campus Policy/Procedures for adoption of research/Teaching Animals)

☐ Other.

14.2. Multiple Dispositions

If more than one disposition is indicated above, identify which group of animals pertains to each method. If "Transfer" is an option, please state what procedures, if any, the animals to be transferred would have experienced on this protocol.

14.3. Emergency Euthanasia Method(s)

In the event that an animal must be euthanized due to unexpected illness or injury, describe the method(s) to be used:

In the event of an unexpected euthanasia due to illness or injury, animals will be anesthetized and given an overdose of Pentobarbital 100 mg/kg IV or IC, once consent from the owner is given.

14.4. Disposal of carcasses

Disposal of carcasses for animals that are euthanized or die unexpectedly will be:

- ☐ Incineration or DRS waste disposal
- ☐ Submission to a recognized museum collection (wildlife only).
- ☐ Landfill (agricultural animals only).
- ☒ Client/Private Owner discretion.

15: Ag Animal Drugs

15.0. Use of agricultural animals

Does this protocol involve the use of agricultural animals whose parts or products may enter the food chain?

☐ Yes ☒ No

All agricultural carcasses and discarded products must be incinerated or landfilled.

16: Funding Sources

16. Funding Sources

List current funding sources. For external funding, update this protocol via amendment if funding is awarded.

- ☒ Internal (any funding supplied by the University of Illinois such as PI start-up, departmental, etc.)
- ☐ PHS (NIH, NSF, etc.)
- ☐ Department of Defense (USAMRMC, DARPA, DMDRP, etc.)

NOTE: It is the PI's responsibility to request and obtain approval of amendments to this protocol from the DoD prior to implementation, regardless of UIUC IACUC approval.

- ☐ USDA
- ☐ Other (Funding applied for, industry, private foundations, etc.)

If you selected Internal, please describe:

PI start-up

17: Personnel Experience

17.1. Principal Investigator (PI)

Name: Sosa Higareda, Maria

Net Id: msosahi

Procedures:

Physical exam, restraint, venipuncture, swab collection

Training/Experience:

Faculty in the Zoological Medicine Service. Residency trained in Zoological Medicine. 6 years of clinical experience with reptile species and 1 year experience in reptile research, including managing a colony of bearded dragons.

17.2. Senior Personnel

Name: Blum, Emily
Net Id: erblum2

Procedures:

Physical exam, restraint, venipuncture, swab collection

Training/Experience:

Veterinary student at the University of Illinois College of Veterinary Medicine. She has experience with the handling and husbandry of reptilian species. She also has clinical experience in venipuncture and other typical procedures.

17.3. Project Personnel

There are no project personnel assigned

University of Illinois
Institutional Animal Care and
Use Committee
Approved: 7/10/2025
Expires: 7/9/2028

Institutional Animal Care and Use Committee

University of Illinois

TO: Mariana Sosa Higareda
FROM: Ryan Dilger
DATE: Thursday, July 10, 2025
SUBJECT: Approval of Animal Use Protocol

Your animal use protocol submission entitled, "Adenovirus prevalence in client-owned bearded dragons," was approved by the Institutional Animal Care and Use Committee (IACUC) on Thursday, July 10, 2025. The IACUC approval number for this protocol is 25098.

Please note that changes in the protocol, animal numbers, or personnel must receive approval by the IACUC.

This approval is valid for a three-year period, which expires on 7/9/2028. If work will continue beyond the expiration date, a new protocol will need to be submitted and approved by the IACUC prior to 7/9/2028. Additionally, federal regulations and campus policy require annual administrative review of protocols. You will receive notification from the IACUC prior to the deadlines for these reviews as well as for the protocol expiration.

If you have any questions, please do not hesitate to contact the IACUC staff.

Sincerely,

Ryan Dilger
Chair, IACUC
University of Illinois at
Urbana-Champaign

IACUC Protocol APPENDIX B:
VETERINARY CARE PLAN FOR INVESTIGATOR-PROVIDED VETERINARY CARE

Protocol: __ Adenovirus prevalence in client-owned bearded dragons

Principal Investigator: Mariana Sosa Higareda

Research Location(s): Building/Farm: Veterinary Teaching Hospital, VMSC

Room Number:

Species (list all): Bearded Dragons

1. Personnel responsible for veterinary care of animals on this protocol:

- a. Please list veterinarians responsible for providing veterinary care and contact information.

	Primary Veterinarian	Secondary Veterinarian	Secondary Veterinarian
Name	Mariana Sosa Higareda		
Department or Clinic name	Department of Veterinary Clinical Medicine		
Primary phone	646-303-8722		
Secondary phone			
Pager or other			
E-mail	msosahi@illinois.edu		

- b. Please list all other non-veterinary personnel who will provide veterinary treatment for the animals, and indicate their training and experience pertaining to the species to be used and the procedures to be performed.

Name	Netid	Primary phone	Secondary phone	Training

2. Please describe the procedure for notification of the veterinarian(s) responsible for veterinary care of an animal found to be ill, injured, or dead.

- a. During regular weekday work hours: Mon-Fri 8am-5pm
- b. During evening, weekend, or holiday hours: Will not collect samples throughout this time

3. Please describe the health monitoring of animals by the above personnel.

- a. Who is responsible for observing the animals?
- b. What is the frequency of observation?
- c. What specific research-related signs will be checked for in the animals?
- d. If the research protocol involves a surgical procedure, please describe the post-operative monitoring and veterinary care needs.

4. Complete medical records must be maintained, and readily available to DAR or AACUP staff and outside inspectors. Where will these records be kept?

Thorough medical records will be kept in SANDI, VTH's record system.

5. I affirm that the University's Attending Veterinarian (AV) will be notified of any unexpected illness, injury, or death, and kept informed of significant changes in an animal's clinical condition in the following manner:

- a. The appropriate AV will be notified *within 24 hours of any unexpected illness, injury, or death*. For animals at laboratory animal facilities, contact DAR by e-mail (daradministrators@illinois.edu), fax (244-7963), or phone (333-2564). For animals at agricultural animal facilities, contact AACUP by email (aacup@illinois.edu), fax (265-6774) or phone (265-6790).
- b. The appropriate AV will be notified *if the animal's condition worsens or does not improve*. For animals at laboratory animal facilities, contact DAR by e-mail (daradministrators@illinois.edu), fax (244-7963) or phone (333-2564). For animals at agricultural animal facilities, contact AACUP by email (aacup@illinois.edu), fax (265-6774) or phone (265-6790).
- c. The appropriate AV will be notified *when the case is resolved*. For animals at laboratory animal facilities, send a copy of the medical record by fax (244-7963) or by campus mail to DAR, 1 Observatory, MC-194. For animals at agricultural animal facilities, record the resolution in the medical record, which is kept on site and available for inspection by the AACUP.

Name of primary vet care provider:

Printed Mariana Sosa Higareda

Signature 

Name of Principal Investigator:

Printed Mariana Sosa Higareda

Signature 

The Veterinary Care Plan form must be printed, signed by the PI and the primary provider of veterinary care, and the original signed copy must be scanned and attached as a PDF to the appropriate IACUC protocol or sent to the IACUC Office at iacuc@illinois.edu, or via mail to 114 Observatory, 901 S. Mathews, Urbana, MC-193. A copy of the Veterinary Care Plan should be posted in the animal housing area.

Name of Study: Adenovirus prevalence in client-owned bearded dragons

Clinical Investigators: Dr. Sosa-Higareda MVZ and Emily Blum

Purpose of Study: Testing client-owned bearded dragons to investigate the prevalence of Adenovirus in symptomatic and asymptomatic bearded dragons.

Eligibility: Any client-owned bearded dragon coming in for a procedure through the University of Illinois College of Veterinary Medicine Zoological Department for any procedure that would not interfere with data collection.

Description of Procedures: All scheduled client procedures and exams will continue as usual; the only additional procedure will be completing a blood draw from the patient for a blood liver panel, as well as an oral and cloacal swab.

Possible Benefits / Owner Incentives: The patient and client will benefit economically and medically from being in the study via a free liver panel.

Associated and Unforeseen Risks: The possible risks for patients participating in this research study are: soreness, irritation, or inflammation of the cloacal region from the swab test. Patients may feel discomfort or pain at the venipuncture (blood draw) site due to inflammation or infection. Patients may experience additional stress during procedures. Additionally, there may be unforeseen risks of participation in this study. In the event of unforeseen risks, the investigator will use his or her judgment to guide the care of your animal and discuss options with you when possible under the circumstances. The investigator may terminate your animal's participation in the study if continuation is not in the best interest of your animal or as otherwise deemed prudent or necessary by the investigator.

Confidentiality: Government regulatory agencies and the University of Illinois College of Veterinary Medicine may inspect and/or copy the records for your animal for quality assurance and data analysis. These records may contain private information. Additionally, the investigators may use data generated from this study, including photographs and video images, in scientific journal articles or presentations and for educational purposes. Neither you nor your animal will be identified individually in such articles, presentations, or educational programs.

Compensation and Financial Obligations: You will not have costs from your animal's participation in this study. You will be responsible for any costs associated with the normal course of treatment, the treatment of any complications that may arise, and unrelated medical conditions.

You will not be compensated for your animal's participation in this study.

Questions about this project may be directed to:

Dr. Sosa-Higareda MVZ: msosahi@illinois.edu

Emily Blum: erblum2@illinois.edu

Voluntary Participation and Right to Withdraw: Participation in this study is entirely voluntary. Refusal to participate or to continue participation carries no medical penalty, and you are free to

withdraw your animal from this study at any time without medical penalty or prejudice. Your voluntary removal will constitute disqualification from further participation in this study.

Required Withdraw and Disqualification: The investigator has the right to terminate the study for any or all participants at any time and for any reason. Your animal may be required to withdraw from the study for violation of eligibility requirements, or noncompliance with restrictions and/or procedures during the study. This also constitutes disqualification. Your animal may also be required to withdraw from the study to protect your animal's health (such as with the occurrence of significant injury, adverse reactions, or illness whether or not a consequence of the study), or if the study is terminated early.

IACUC Approval #: (must be entered prior to signature acquisition). This research has been reviewed and approved by the Institutional Animal Care and Use Committee (IACUC) of the University of Illinois (UI).

Acknowledgements: (Please note: Before being accepted into any clinical trial, all animals must be evaluated and officially enrolled by the study principal investigator. All owners must sign an official study consent form before their animal will be accepted into a clinical trial. The cost of pre-evaluations may be the responsibility of the owner. Please be sure to contact the study investigator if you have any questions or concerns.)

Owner Signature: Your signature indicates: (1) you provide your informed consent and voluntarily agree to your animal's participation in this study knowing and understanding all the risks and requirements stipulated above; (2) you are the legal owner of the animal or are an agent of the owner with authority to consent to the animal's participation in this study; (3) you have not withheld information regarding your animal's medical history; (4) you have read, understood and agree to the terms of this consent form, including but not limited to the purpose and nature of this study and its associated procedures, as well as any possible risks, and all your questions have been answered to your satisfaction; and (5) you agree to hold harmless Board of Trustees of the UI, the VTH, and its officers, employees, agents and assigns from any and all liability, claims and actions that may arise from participation in this study. You will receive a copy of this consent form upon request.
