

Bearded Dragon Adenovirus Study

Inclusion Criteria

- ☐ All bearded dragon here for **routine** or **sick** exam

Exclusion Criteria

- ☐ Owner declines consent
 - ☐ Medical condition makes sampling unsafe (per DVM)
 - ☐ Already sampled for this study (check MR + SANDI)
 - ☐ Venipuncture skipped due to size limitations (clinical samples take priority)
-

Step 1 – Verify Eligibility

- ☐ Check MR and SANDI for prior study participation

Step 2 – Obtain Consent

- ☐ Ask owner about participation. Have owner sign consent form - place consent form in binder

Step 3 – Exam

- ☐ Perform medical exam as usual

Step 4 – Oral & Cloacal Swab

- ☐ Use **one swab** for both oral + cloaca
- ☐ Place in **empty Eppendorf tube**
- ☐ Label: **Date + MR number**
- ☐ Store in **research box in fridge**
- ☐ Log in **sample log** in fridge

Step 5 – Blood Sample

- ☐ Collect **0.5 ml** from ventral coccygeal vein or jugular
- ☐ If blood already being collected for clinical use → collect extra 0.5 ml for research
- ☐ Ensure total blood $\leq$ **1% body weight**
- ☐ Place in **green-top tube** → centrifuge
- ☐ Transfer plasma to cryovial (label: MR #)
- ☐ Store in **project box in fridge**
- ☐ Log in **sample log**
- ☐ If < 0.5 ml → note on log
- ☐ If unable to process due to timing → notify research team, and place sample in fridge

Step 6 – Labeling

- ☐ Both tubes labeled with **MR # + Date**

Step 7 – Notify

- ☐ Call/text **Emily Blum** (VM2) at 541-817-9849 after each patient or by end of day

Step 8 – Record in SANDI

- ☐ Add temp note: “Participating in bearded dragon research study”
-
